Senior Frontend Engineer building web products since 2018, with experience in recruitment platforms, visual page builders and internal search tools. I work with React, Next.js and TypeScript across shared frontend packages and business workflows. My work includes frontend performance, code review and mentoring, alongside open-source developer tools.

EXPERIENCE

Senior Frontend Engineer, Navigos Group Vietnam | Apr 2023 - Present

- Own the frontend of Talent One's landing-page builder, a paid add-on where employers assemble branded recruitment pages from blocks, with drag-and-drop layout, undo and redo, and draft and publish; 12 pages published since April 2026, for clients including banks and an international talent program.
- Designed core parts of the app shell that Talent One's feature packages build on: typed nested routing with per-route middleware, package API routes, a typed API client, app-wide state and typed EN/VI translations that switch the whole app without a reload.
- Built the frontend for Talent One's AI job posting, which drafts a job from a prompt, a JD file or a link; about 3 in 4 employers who post a job use it each month.
- Made the Employer app's build 2.4x faster and halved its CI job by reworking the toolchain (dependency cleanup, Yarn 4, TypeScript 7, Turbopack, narrower imports), and shipped two Trivy dependency-fix rounds, the Next.js 16 upgrade and fixes for two server memory issues through the dev, staging and main branches.
- On VietnamWorks, built the frontend for candidate recommendations and AI screening in the Employer job-management app, where I have the largest share of commits since 2024, and JobSeeker micro-frontend features such as multiple CV attachments and a collapsing mobile search header.
- Built a development harness that gives coding agents one flow from the Jira ticket, PRD, Figma design and code graph to an isolated worktree, a merge request, a Jenkins build of the exact source and the smallest test that proves the change.

Web Developer, Navigos Group Vietnam | Aug 2019 - Mar 2023

- Rebuilt the recruiter search of PRIMUS, Navigos Group's career platform for senior professionals, from React to Angular with result caching, prefetching and route preloading: candidate profiles open 14x faster and repeat searches return instantly.
- Built shortlist pages for PRIMUS recruiters and extended the Symfony endpoints behind them.
- Main developer of New Boolean Search, a SvelteKit app where Navigos consultants search candidates from VietnamWorks, PRIMUS and Navigos Search in one place.
- Built the Interconnect Chrome extension and its NestJS rule API: it reads the LinkedIn profile a consultant is viewing and shows that person's matches in New Boolean Search.

Web Developer, EMG Edutech | Jan 2018 - Aug 2019

- Built EMG Smiles, an online learning platform, in Angular with Node.js APIs in NestJS and Hapi (TypeORM, PostgreSQL): lessons, quizzes, discussions and real-time notifications.
- Built company websites on custom WordPress themes.

SELECTED PROJECTS

FIX Partner website (freelance) | fixpartner.co

Rebuilt a software company's website from WordPress to Next.js and Payload CMS, end to end: moved 14 pages and 135 posts into a CMS the client's team edits, and set up the hosting; mobile PageSpeed went from 17 to 94.

UWANT Vietnam website (freelance) | uwant.com.vn

Built and launched, solo, a product website where buyers in Vietnam compare cleaning appliances and reach local support, on a custom WordPress theme; maintained since its 2026 launch.

React utilities (open source) | github.com/khanglvm/react

Typed context state with selector hooks, Immer updates and per-update rollback, plus typed translations. First written for VietnamWorks Employer; the company version of this code now carries Talent One's app-wide state and EN/VI switching.

figma-lens (open source CLI and agent skill) | github.com/khanglvm/figma-lens

Gives a coding agent the exact fonts, sizes, colors, spacing and assets of one Figma screen, without loading the whole layer tree or running Figma Desktop, then compares the built UI with the design screenshot.

SKILLS

Frontend: TypeScript, JavaScript, React, Next.js, Angular, SvelteKit, HTML, CSS, Tailwind CSS, shadcn/ui, Ant Design

State and data: Zustand, Jotai, TanStack Query, Immer, RxJS, NgRx, REST APIs

Architecture and performance: Monorepos (Turborepo), micro-frontends (Module Federation), Core Web Vitals, SEO, build tooling (Turbopack, TypeScript 7, Vite, Bun)

Testing and quality: Playwright, Puppeteer, Jest, Vitest, code review, dependency scanning (Trivy), framework upgrades

Backend: Node.js, NestJS, Express, Hapi, PostgreSQL, MongoDB

Delivery: Docker, Nginx, Jenkins, GitLab, Cloudflare Workers

AI tooling: Claude Code, Codex, MCP, CLI tools for coding agents (figma-lens, Jira CLI, Outline CLI)

EDUCATION AND LANGUAGES

Bachelor's degree, Computer Science, International University (VNU-HCM), 2012 - 2016

Vietnamese (native), English (intermediate)
